Capstone context session

HealthTech and AI-enabled wellness technologies

Agenda and objectives

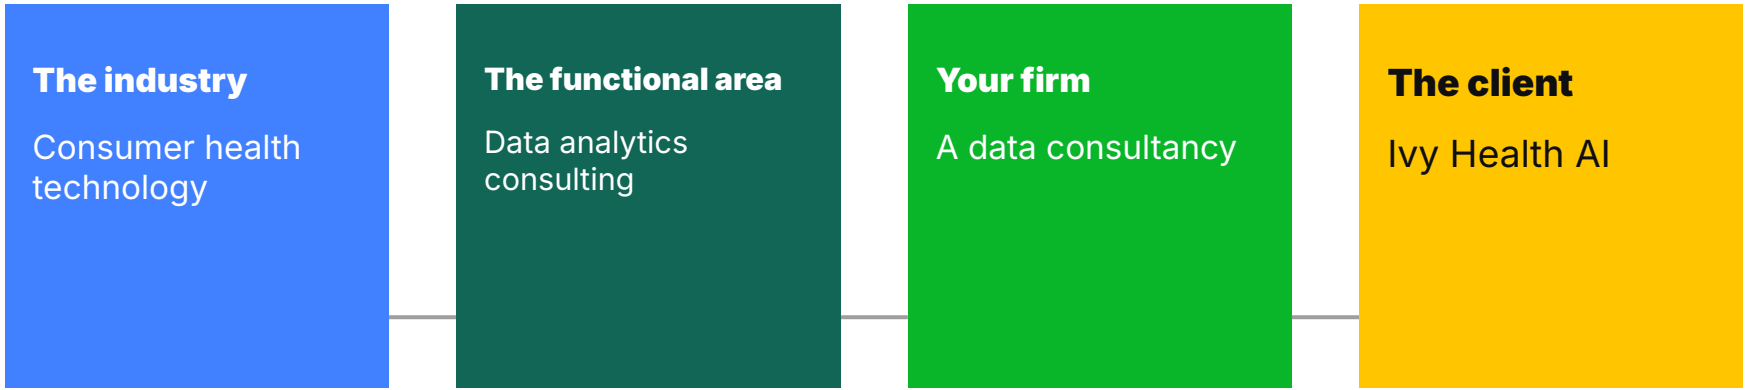

Session agenda

- The industry: consumer health technology
- The functional area: data analytics consulting
- Your firm and your role
- The client: Ivy Health AI
- Core ideas and definitions
- Project kickoff and pod setup

Learning objectives

1. Explain how consumer health technology companies make money and what rules shape the industry.
2. Describe what a data analytics consultant does and why companies rely on outside evidence.
3. Explain why Ivy must choose two of four product lines for research and development (R&D).

Your capstone at a glance

You will work as a Data Analytics Consultant at a data consultancy advising Ivy Health AI. The capstone runs over seven meetings: tonight, Capstone Introduction Night, then Capstone Nights 1 to 6.

Consumer health technology and femtech

The industry

Consumer health technology and how it makes money

Consumer health technology makes products people buy for themselves to understand or improve their health, with no doctor or insurer in the middle.

- **Products:** apps, wearables, at-home tests and the online services that connect them.
- **Femtech:** products for cycles, fertility, pregnancy, perimenopause and menopause.

How money is made

- **Hardware** sold once, **subscriptions** paid monthly or yearly, and **repeat purchases** such as tests.

In plain terms, companies in this industry earn the most from people who keep coming back.

The main players in consumer health technology

Cycle and fertility apps

Flo has a large user base, a free version and a paid tier, and competes on accuracy and privacy.

Wearable devices

Oura, Apple Watch, Fitbit and Garmin compete on turning sensor readings into useful insights.

Content and coaching apps

Calm sells subscriptions to guided programs and content.

At-home testing

Hormone, fertility and menopause blood tests offer convenience, but results need interpretation.

Regulated digital health

Natural Cycles competes on clinical evidence and Food and Drug Administration (FDA) authorization.

The rules that shape it

The Federal Trade Commission polices health data privacy; the FDA can regulate medical claims.

Your role: data analytics consulting

The functional area

What a data analytics consultant does

A data consultancy helps a client make a decision based on evidence.

- Define the question the client needs answered.
- Find, clean and analyze the data, including data from similar products when the client's own is unavailable.
- Explain what the data does and does not show.
- Recommend a course of action the client can act on.

Why companies need it

Companies have more data and more choices than ever. An outside team brings a clear method and an honest view of the evidence before money is committed.

Where this work leads: job families and sample titles

Data analysis

Turn raw data into answers and reports. Titles: Data Analyst, Junior Data Analyst, Reporting Analyst.

Business intelligence

Build dashboards that teams use daily. Titles: Business Intelligence Analyst, Reporting Developer.

Product analytics

Measure how people use a product. Titles: Product Analyst, Growth Analyst, Experimentation Analyst.

Analytics consulting

Advise clients on decisions. Titles: Analytics Consultant, Associate Consultant, Business Analyst.

Data science

Build models that predict or classify. Titles: Associate Data Scientist, Machine Learning Analyst.

Data engineering

Build the pipelines that move and clean data. Titles: Analytics Engineer, Junior Data Engineer.

Your firm and your role

Your firm

A data consultancy helps a client make a decision based on evidence. Your cohort works as one unnamed data consultancy.

Your role

You are an Associate with the title Data Analytics Consultant.

Who guides and reviews your work

Your captain acts as your Junior Manager and mentors your team every night. Before a recommendation reaches the client, the firm's Engagement Review Committee tests it. In this capstone the committee is one person: the Senior Manager, your senior captain.

Ivy Health AI, from Bellabeat to Ivy

The client

Ivy Health AI

Who they are

Ivy Health AI is the consumer brand of String Health Inc. It began as Bellabeat, known for wellness trackers designed to look like jewelry.

From Bellabeat to Ivy

2021: Ivy, a tracker worn on the wrist, launched with over 50,000 preorders.

April 2025: joined the STRING group, beside a sister business focused on health AI.

What changed and why now

Ivy says it is becoming an AI-first women's health platform. It must set R&D priorities for next quarter, cannot fund all four of its product lines and will not share its own user data.

Core ideas and definitions

Initiative

One funded piece of R&D work on one product line, with a start date and measurable results.

Retention

The share of users still active a set number of days after they start, usually Day 7 and Day 30.

Conversion

The share of free users who become paying members.

Device connection rate

The share of app users who have connected a device to the app.

Proxy data

Data from similar people or products, used when the client's own data is not available.

Revisit condition

The evidence or event that would lead Ivy to reconsider a line it did not fund.

Key takeaways

- Consumer health technology sells directly to people, so companies earn the most from users who keep coming back.
- Companies earn money through hardware, subscriptions and repeat purchases, and the three streams depend on one another.
- Privacy rules and medical claim rules shape what a women's health company can build and how fast.
- A data analytics consultant defines the question, analyzes the evidence and says plainly what it can and cannot show.
- Ivy, once Bellabeat, says it is becoming an AI-first company and must now choose where to invest its R&D.

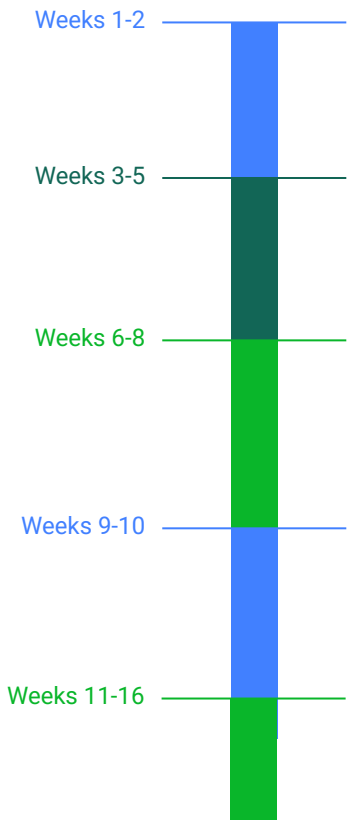

Capstone project

Product R&D Strategy

Revisiting the learning journey and core learning goals before diving into the project

Checkpoint and reflection

Revisit: National unit architecture (head topics)

Industry Literacy

- Respective Industry introductions
- Introduction to foundational AI concepts
- Professional competencies for entry level professionals

Technical Foundations

- Foundations in leveraging spreadsheets to solve real problems
- Navigating and generating insights from dashboards and reports
- Familiarity with data-driven decision making

Mid-cycle Project

- Applied learning for solving real world problems
- Testing for group collaboration and communication
- Effective presentations and data storytelling

Special Topics Case Study

- Knowledge of industry trends, technologies and outlook
- Articulate challenges and opportunities within the landscape
- Leverage artificial intelligence for real industry solutions

Capstone Project

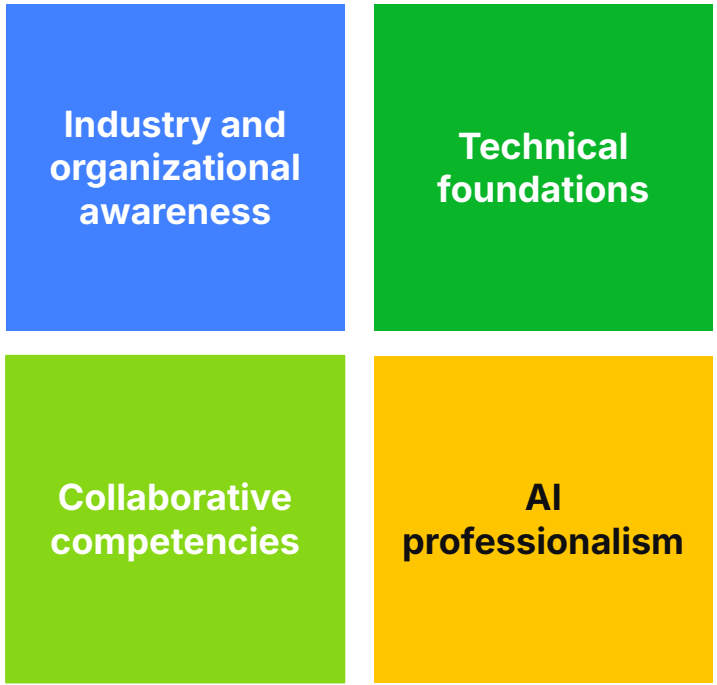

- Simulate a client services experience centered around a real business problem
- Build comprehensive, multi-asset portfolios and client-facing materials
- Collaborate and deliberate with internal teammates to craft a client-facing solution

Understanding the Capstone

The overall goal of this capstone project is to enable fellows to articulate professional experience that leverages multiple competencies to solve a problem. These competencies are derived from several conversations with COOP's employer partners, who have shared what qualities make an entry level candidate hirable in today's employment landscape.

Pause and absorb these. Discuss, how do these show up for you in your current roles? Why might our employer partners consider these to be the main drivers of evaluating professional readiness?

Think outside the box! The goal is not to analyze X data, or use Y tool, its to develop the multiple muscles needed to be a professional today. What's your best muscle group?

Revisit: AI Professional Certificate

By this point you should be wrapping up the Google AI Professional certification on Coursera, and submitting all your proof of completions on Brightspace. Your learnings from this program will shape the outputs you will produce, giving you an opportunity to showcase how you use AI in a professional context.

Note: Course 7 and Course 8 will not be as relevant to this project; you will mainly be applying your AI skills from the other 6 courses.
Discuss: Is there a particular AI skill or tool you learned from the coursework that you're excited to experiment with during the capstone?

Week	Peer-to-Peer AI Demo Blocks	Courses referenced	Date due on Brightspace
Week 4	Foundations	Course 1: AI Fundamentals	due Sunday 9/6
		Course 2: AI for Brainstorming and Planning	due Sunday 9/6
Week 7	Communication	Course 3: AI for Research and Insights	due Sunday 9/27
		Course 4: AI for Writing and Communicating	due Sunday 9/27
Week 9	Productivity	Course 5: AI for Content Creation	due Sunday 10/11
		Course 6: AI for Data Analysis	due Sunday 10/11
Week 11	Building	Course 7: AI for App Building	due Sunday 10/25
		Course 8: AI for App Deployment	due Sunday 10/25

STAR carries your career story through every night

STAR Goals

Each capstone night opens with a STAR Goal: four lines (Situation, Task, Action, Result) that say what the night leads to.

STAR lines

At the end of each night, you write what you did as one STAR line. Six nights give you six lines of evidence.

STAR stories

After Night 6, you turn your strongest finding into a STAR story you can use in interviews.

You already know STAR from STAR Samples 1 to 6. The capstone gives you new stories to tell.

Data Analytics capstone kickoff

The engagement, the options and the positions

Project overview

If Ivy can fund only two of four product R&D initiatives next quarter, which two should it fund, and why those two over the other two?

This forcing question cannot be answered with "all of them" or "it depends".

Four pods, four options: each pod owns one product line

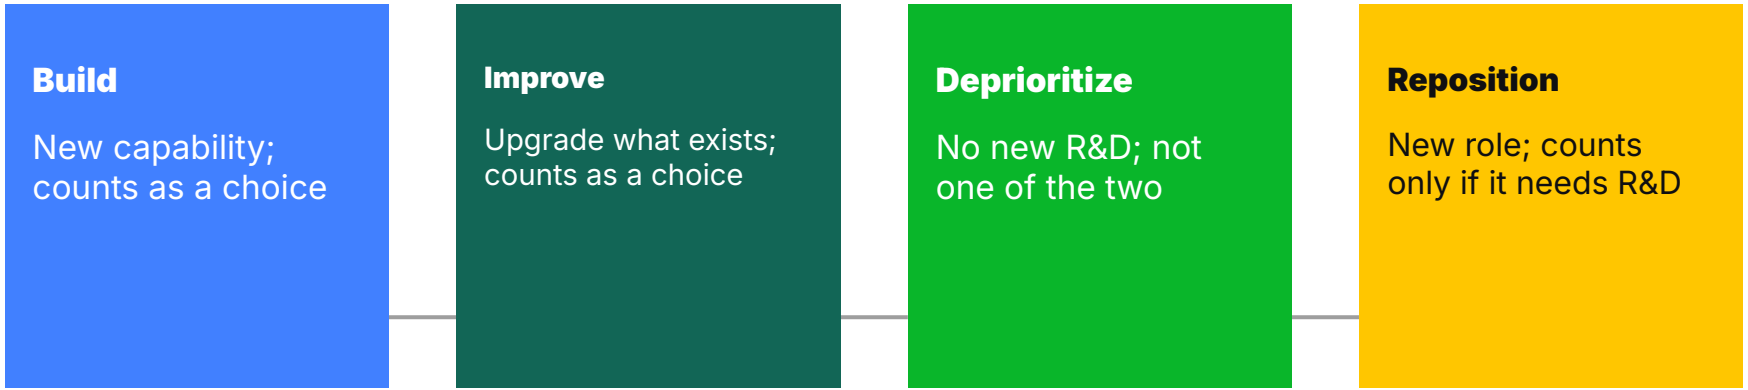

A pod is a team of three to five fellows. Each pod owns one option and builds its scorecard with evidence.
No single pod can answer the question alone. The cohort chooses its two on Night 5, after hearing all four positions.

The 2027 horizon, the objective and key results

Your answer covers 2027. The two funded initiatives begin in Q1 2027, meaning January to March.

- **Objective:** grow the number of engaged, paying users by focusing R&D on what makes Ivy different in women's health.
- **Key results:** your cohort proposes two to four, each with a baseline and a target.
- **Examples:** raise an app's store rating, increase the device connection rate, improve 30-day retention or grow conversion.
- **Revisit conditions:** each line you do not fund needs the evidence or event that would reopen it later in 2027.
- **Budget:** Ivy has not set one. Your cohort decides what each funded initiative needs and explains why.

The positions you can take for your product line

Every pod finishes with one of these exact words for its line. Deprioritize and Reposition each need a revisit condition.
A pod that recommends either one for its own line, with a strong scorecard, can earn full marks.

The framework, the rubric and how you will research

How you will decide

The DFV+ Scorecard

What it is

Product and innovation teams use three tests before they fund an idea: Desirability (do people want it?), Feasibility (can the company build it in time?) and Viability (will it pay off?).

Why the industry uses it

An idea that fails any one of the three tests wastes R&D money.

The fourth criterion

This engagement adds Strategic fit: does the initiative move Ivy toward the AI-first women's health company it says it is becoming? An idea can pass the first three tests and still move Ivy away from that direction.

Scoring

DFV+ stands for Desirability, Feasibility and Viability, plus Strategic fit. Each criterion is scored 1 to 4 with equal weight, for a total out of 16.

Four criteria, scored 1 to 4, with evidence and a source for every score

Desirability

Do users want this, and does its absence hold them back? Look at reviews, surveys and forums.

Feasibility

Can Ivy deliver this in 2027 with the parts it already has, and would it make a medical claim?

Viability

Will this grow engaged, paying users? Look at prices, competitors' offers and how people pay.

Strategic fit

Does this move Ivy toward an AI-first women's health company built on its own data?

How a score is written

The number, one sentence of evidence, the source with its date and the research stage.

How the total is read

13 to 16 is strong, 10 to 12 possible, 9 or lower usually Deprioritize or Reposition.

How you will research

Every pod follows the same four research stages: Explore, Find the gaps, Research and Synthesize.

- **All sources are equal.** Label each one quantitative (how much, how often) or qualitative (why, what people think), and use both.
- **Defend each source:** "We leaned on [source] because [reason]. Its limit is [what it cannot tell us]."
- **Record each observation** as where we looked, what we noticed, why it matters and how much we trust it.
- **Date everything.** Ratings and prices as of the day checked; reviews from the last 12 months; Google Trends over five years.

Roles, deliverables, templates and timeline

How the capstone runs

Roles: who does what

Senior Manager

The senior captain. Sits alone as the Engagement Review Committee and evaluates the Night 6 presentation.

Captains

Junior Managers, one per pod. Run each night's standup, check work nightly and lead peer scores.

Data Analytics Consultant

Your role every night. Own at least one piece of work, use AI responsibly and present on Night 6.

Pod lead

Elected tonight, one per pod. Your captain's main contact; merges sections and leads the Night 5 decision.

Pod rep

Rotates nightly. Gives the pod's update in the Daily Standup, the 15-minute check that opens each night.

Notetaker

A rotating volunteer. Records meeting minutes and reads the night's STAR Goal aloud before pod work.

What you will produce

Two required working documents and two graded pieces. The deck convinces your firm; the memo stands on its own.

Preliminary Discovery (required, not graded). One per pod, about two pages, due at the end of Night 2: your evidence and a draft scorecard.

AI Disclosure Statement (required, not graded). One per pod. Records how your pod uses and checks AI; Parts 1 to 4 are due on Night 1.

Internal R&D Proposal (graded). One cohort deck, presented on Night 6 to the Engagement Review Committee.

Product Investment Memo (graded). Two to three pages for Ivy's head of product, two choices first. Final before Night 6.

Shared templates and the Project Folder

Team Charter

One per pod. Roles, owners, team agreements, standup drafts, a first peer review check on Night 3 and each fellow's final review.

Running agenda

One per cohort, not graded. Each pod loads its progress row before every Daily Standup, and the Notetaker records the minutes.

Project Folder

One per cohort, built by captains. Internal Resources holds working files and the deck; Client-Facing Resources holds only the memo.

Files made before Night 3 start as Google Docs shared with your captain and move into the Project Folder on Night 3.

How every night runs

Daily Standup

15 minutes, run by captains. Each pod rep gives the pod's update from the running agenda; the Notetaker records minutes.

Working block

Pods work in breakouts toward the night's STAR Goal, which the Notetaker reads aloud, following the night guide.

Regroup

Career discussion and shareouts, four reflection prompts on your own, then the pod loads the agenda for next session.

The Daily Standup is for status only. Take debates about findings and reviews of drafts to pod time.

Project timeline at a glance

Introduction Night	Night 1	Night 2	Night 3	Nights 4 to 6
Set up. Pods form, Pod leads are elected, and each pod copies its Team Charter and AI Disclosure Statement.	**Explore.** Agree how to score your line, explore Ivy's pages and open data, and turn gaps into questions.	**Research.** Answer your research questions and finish the Preliminary Discovery with a draft scorecard.	**Communicate.** Business Communications deck, files into the Project Folder and Team Alignment.	**Test, decide, present.** Test scorecards and draft (Night 4), decide (Night 5) and present (Night 6).

How your work is graded

Evaluation

Shared 80 and individual 20

Shared: 80 points

- **Accuracy (20 points).** Every score backed by evidence, a source and a date, with one method across pods.
- **Utility (20 points).** The client could act on the memo alone, with the two choices first.
- **Communication (20 points).** The memo and deck tell one story from evidence to choice, including limits.
- **Presentation (20 points).** The answer comes first, and every speaker can explain their numbers.

Individual: 20 points

- **Self-score (10 points).** Your own score from 1 to 10 against the five collaborative competencies.
- **Peer score (10 points).** Agreed in a pod conversation your captain leads after Night 6.
- **Required, not graded.** The Preliminary Discovery and the AI Disclosure Statement carry no points, but your graded work depends on them.

How peer review works

Part of your individual 20 points

Team Alignment comes first. On Night 3 your pod holds its first peer review round on how it works together, recorded in the Team Charter.

Everyone starts at 10. A score is lowered only with clear evidence, such as owned work left undone or absences the pod was not told about.

Your captain leads. After Night 6, your captain leads the pod conversation, records each score and signs off your final review.

Full marks are possible. The running agenda is never used as evidence, and every fellow who contributed fairly can earn full marks.

Let's set up your pods

Project launch

Tonight: set up your pod

1. Elect your Pod lead

Five minutes.

Each pod elects one Pod lead, who coordinates the pod's work and is your captain's main contact.

2. Start the Team Charter

15 minutes.

Copy the template, then fill in Part 1 Pod details and Part 2 roles, owners and backups.

3. Start AI Disclosure

10 minutes.

Copy the AI Disclosure Statement, name owners in Part 1 and share it with your captain.

4. Running agenda

Five minutes.

As a cohort, create the running agenda from its template and name the first Notetaker.

Time to build.

See you on Capstone Night 1!
