Preliminary Discovery

Pod Number: C690
Document Date: 10/28/26
Date Range of Data Used: …

Purpose Paragraph

This document records Pod 2's baseline evidence, scoring anchors, and data limits to evaluate Q1 2027 R&D for IVY Apps and AI Health Assistant without internal client data.

Scoring Approach

Desirability: Do users want it, and does its absence hold them back?
Using the App Store, with over 86k overall ratings of the app. It stands at 4.7 stars out of 5. This feat alone is desirable for its target demographics.
(Measures how strongly women demand accurate cycle tracking and personalized AI insights, and whether existing bugs and lack of smart insights hold them back.)

Feasibility: Can this be delivered?
(Evaluates whether Ivy can deliver software and algorithm upgrades across both apps in H1 2027 using existing StringAI assets without requiring new hardware tooling or multi-year FDA De Novo approvals.)

Viability: Will this grow?
(Evaluates whether improving app reliability and upgrading AI features will increase daily active engagement (DAU), reduce churn from sync failures, and convert free cycle tracker users into paying members ($47.99/yr).)

Strategic: Does this align with the company? Will the AI be in line with expectations?
(Evaluates whether this initiative directly operationalizes Ivy's shift into an "AI-first women's health platform" powered by proprietary female biometric data.)

Where Ivy Stands Today

Product Line:

- IVY Wellness Coach: connects to the IVY+ wearable and paid membership.
- IVY Period & Pregnancy Tracker:

Pricing:

- After new user 65% off → $47.99/year (Oct-28-2026)

Ratings & Review Counts:

- Average Rating (APP Store): 4.7/5.0
- Average Rating (Play Store): 3.2/5.0
- Number of Ratings (APP Store): 68k
- Number of Ratings (Play Store): 9.8k

- Number of Downloads (APP Store): N/A
- Number of Downloads (Play Store): 500k+

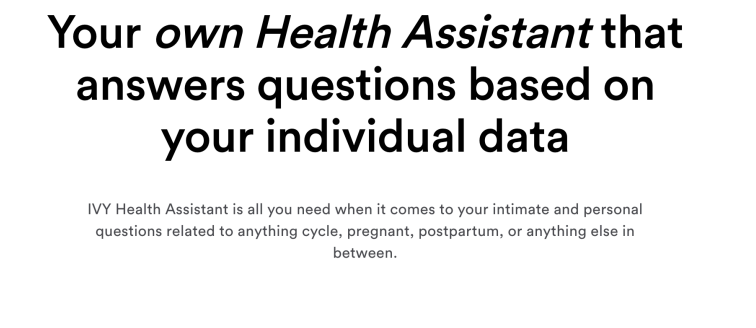

Marketing Claims:

- Becoming an AI-first women's health platform built around women's biology, combining biometric data, cycle intelligence, behavioral patterns, and proprietary AI models.
- Your own Health Assistant that answers questions based on your individual data.

App Connections:

- IVY Wellness Coach connects to IVY+ / Leaf hardware sensors and syncs with Apple Health and Google Fit. The two apps currently maintain separate databases and login ecosystems, creating fragmented user journeys between cycle tracking and wearable biometrics.

Original Question: Where do users get the most and least value from Ivy's two apps, and what should the AI Health Assistant do next to increase daily use and retention?

3 - 5 Data Observations

Where we looked	What we noticed	Why it matters	How much we trust it
Observation 1: Apple App Store & Google Play Store baselines (Checked Oct 28, 2026)	IVY Period & Pregnancy Tracker has 67,901 ratings on iOS with a 4.66 score, whereas IVY Wellness Coach has only 409 iOS ratings and a 3.46 score on Google Play.	Shows Ivy's massive, loyal user base resides in standalone cycle tracking, while the wearable coach app suffers from low engagement and store visibility.	**Strong**: Official public store metrics directly capturing live user distribution.
Observation 2: Apple App Store	Complaints repeatedly cite	IVY Wellness Coach and IVY Period &	**Strong**: Verifiable qualitative feedback

review	hardware sync failures between Leaf/Ivy devices and the Wellness Coach app, as well as lost historical cycle data during app updates	Pregnancy Tracker currently maintain separate database and login ecosystems, creating fragmented user journeys that trigger subscriber churn	
Observation 3: Women's Trust in Digital AI Health Tools: KFF Women's Health Policy Survey	The KFF brief finds that many reproductive-age women use AI for health questions, but few trust it. About 42% of women ages 18 to 49 used an AI tool or chatbot for health information in the past year. Only 25% said they trust AI tools and chatbots a great deal or a fair amount for reliable health information, compared with 86% for their health care provider.	Demonstrates strong consumer demand for AI health conversational tools, provided Ivy grounds its AI Health Assistant in proprietary biometric data rather than generic text responses	**Weak**: Survey represents general U.S. female health consumers seeking digital health guidance, rather than current Ivy app subscribers
Observation 4: Regulatory Boundaries for AI Claims: FDA De Novo Authorization Record for Natural Cycles	Software predicting cycle phases for medical/contraceptive claims required multi-year clinical trials and formal FDA De Novo clearance	To ensure delivery in H1 2027, Ivy must keep the AI Health Assistant positioned as lifestyle coaching and wellness intelligence rather than making diagnostic medical claims	**Strong** for establishing regulatory boundaries, though limited as a competitor case study

Sources Table

Source	Quantitative or Qualitative	Why it is relied upon and its limits
Apple App Store & Google Play Store Baselines (Checked Oct 28, 2026)	**Quantitative**	**We leaned on app store public listings because they provide verified,**

		objective data on total user volume, store ratings, and subscription pricing. Its limit is that public figures cannot reveal internal active user counts (DAU/MAU) or retention curves.
Multi-Country App Store Corpus (ivy_pregnancy_tracker_review.xlsx: 5,518 reviews, 2011–2026)	**Qualitative & Quantitative**	**We leaned on the expanded 5,500+ review dataset to confirm that hardware sync failures and high cycle tracker satisfaction are consistent across global markets. Its limit is that older reviews reflect legacy Bellabeat hardware (Leaf, Spring) rather than the current IVY+ device.**
KFF Women's Health Policy Survey		
FDA De Novo Authorization Record for Natural Cycles

Everything disappeared

by Nagfreedom25

I've been using IVYPeriodPregnancyTracker for many many years and I needed to get a new phone. Once I got my new phone and re-enterred my password etc the whole app look and even name changed (I even went in and paid for the other app that looked more like the one I had been using but this one cost which my other one was free and on my phone already called period diary and after paying that one didn't have my info either) AND all my past several years of period tracking all disappeared and there was no one to even contact to find out what happened so now I'm completely starting from scratch which this information should be stored someplace but I cannot figure out how to access it bc IVYPeriodPregnancyTracker doesn't have any contact us or chat place to ask questions or get assistance. It's so frustrating to have it work great and then all my data be gone overnight. I had it tracking my period to the day but now it's all messed up. I'm so annoyed by this

Research Question:

- **1. Where do users get the MOST value from Ivy's two apps?**
- **2. Where do users get the LEAST value?**
- **3. Data Integration: Should Ivy unify IVY Period & Pregnancy Tracker and IVY Wellness Coach into a single consolidated app in Q1 2027 to eliminate user friction, or keep them separate?**
- **4. AI Capability Upgrade: What specific biometric inputs (e.g., HRV, basal body temperature shifts) must the AI Assistant incorporate to provide predictive perimenopause and cycle insights rather than reactive text chat?**
- **Conversion Percentage: What percentage of the 67,000+ free iOS cycle tracker users can be converted to the $47.99/year membership by gating advanced AI predictive insights behind the paywall?**

- **Header: Title, pod number, document date, and the date range of the data used**
- **Purpose Paragraph: A brief paragraph introducing the document's purpose**
- **Where Ivy Stands Today: Overview of their assigned product line (what Ivy currently sells, prices, ratings, review counts, marketing claims, and app/device connections, with dates for every figure)**
- **Scoring Approach: Agreement on how the pod applies the DFV+ criterion anchors to their specific product line**
- **3–5 Data Observations: Recorded using the required 4-part format (*Where we looked, What we noticed, Why it matters, How much we trust it*), including 3-line proxy statements for any non-Ivy data**
- **Sources Table: Listing each source, classifying it as quantitative or qualitative, and including a 2-sentence defense of why it was relied upon and its limits**

What's new

Hello Bellas,

No big changes this time, just a little tune-up! We've fixed minor bugs and polished things up so your IVY app works like a charm.

Forever yours,
The IVY Team
